SHOW UNVEILING - IMTEX FORMING 2026

Powering Progress in Forming

IMTEX FORMING 2026 opens its doors today at the Bangalore International Exhibition Centre (BIEC), welcoming visitors eager to explore the latest advancements in metal forming and manufacturing technologies. Organized by the Indian Machine Tool Manufacturers' Association (IMTMA), the exhibition will run until **January 25**, bringing together machine tool builders, technology providers, industry associations, and international participants on a single platform.

Source: Magic Wand Media

Bengaluru is once again abuzz with industrial activity as **IMTEX FORMING 2026**, Asia's largest exhibition on metal forming and manufacturing technologies, gets underway at BIEC. Over the next five days, the event promises not just an extensive display of machines and solutions, but also a vibrant exchange of ideas, technologies, and partnerships that reflect the evolving priorities of India's manufacturing sector. Spanning four exhibition halls and covering approximately 48,000 sq mt of gross exhibition space, **IMTEX FORMING 2026** hosts 714

exhibitors, including partner associations from 24 countries. Dedicated country pavilions from Germany, Italy, Japan, and Taiwan further reinforce the exhibition's global stature, with exhibitors presenting advanced technologies and solutions tailored to emerging manufacturing needs. Highlighting the importance of the event, Mohini Kelkar, President, IMTMA, notes that metal forming currently accounts for nearly 29 percent of the Indian machine tool market and is poised for sustained growth. "**IMTEX FORMING 2026** reflects this momentum by showcasing technologies that will help Indi-

an manufacturing enhance quality, capability, and global competitiveness," she says. Sharing a broader perspective on the industry's evolution, Jibak Dasgupta, Director General & CEO, IMTMA and BIEC, observes that the Indian machine tool industry is at a decisive stage, driven by rising domestic demand and a growing focus on technological self-reliance. "The shift from scale to capability marks a clear maturation of the ecosystem. **IMTEX FORMING 2026** is well positioned to support this transi-

tion by connecting ambition with execution and ideas with real-world opportunities,” he remarks.

A Complete Spectrum of Forming Technologies

IMTEX FORMING 2026 presents a comprehensive showcase of metal forming technologies. Visitors can explore presses, press brakes, bending and shearing machines, stamping solutions, CNC punch presses, and laser and waterjet cutting systems. Advanced processes such as hot stamping, hydroforming, flow forming, and electromagnetic forming are on display alongside forging, extrusion, casting, and pressure die casting technologies that continue to underpin large-scale manufacturing. Automation, robotics, servo presses, precision levellers, fiber laser machines, and AI-enabled production systems further highlight how productivity, precision, and sustainability are being redefined across forming operations.

Beyond the Exhibition Floor

Adding depth to the exhibition are several concurrent events. Tooltech

focuses on tooling systems, machine tool accessories, metrology, and CAD/CAM solutions, while Digital Manufacturing highlights Industry 4.0 and additive manufacturing. WeldExpo, organized in collaboration with the Indian Institute of Welding (IIW-India), showcases the latest developments in welding technologies. Running alongside the exhibition on

To bridge the gap between academia and industry, the i2 Academia Square will unite premier institutions from across India to showcase academic research and development relevant to manufacturing industries. For young engineering professionals, the Jagruti-IMTMA Youth Programme will

Toward India's Manufacturing Target

With an expected footfall of over 50,000 visitors, IMTEX FORMING 2026 sets the stage for meaningful business engagement and knowledge exchange. Over the next five days, as discussions unfold and technologies come to life on the

INDUSTRY DIALOGUE: ISFT 2026

A Knowledge Platform on Forming Technologies

The Indian Machine Tool Manufacturers' Association (IMTMA) will hold the 9th International Seminar on Forming Technology (ISFT 2026) on January 22–23, 2026, at BIEC, concurrent with IMTEX FORMING 2026.

ISFT 2026 is expected to attract over 250 delegates from India and overseas. The seminar arrives at a pivotal moment for Indian manufacturing, as forming technologies are being reshaped by advanced materials, digitalization, automation, and sustainability imperatives. "ISFT 2026 comes at a critical time for Indian manufacturing, when forming technologies are evolving rapidly. The seminar will equip industry leaders with the insights, tools, and global perspectives needed to enhance competitiveness and accelerate growth across key sectors," says Mohini Kelkar, President, IMTMA. With participation from Automotive, Aerospace, Defence, and Die & Mold sectors, ISFT 2026 serves as a convergence point for manufacturing leaders, research-

chers, and technology providers navigating the next phase of industrial development.

Curated for Decision-Makers

Designed for high-level decision-makers and technical experts, the seminar this year will bring together manufacturing and production heads, plant managers, tooling and die professionals, design and R&D specialists, and experts in quality, metrology, and process improvement. "With a strong focus on emerging technologies such as giga stamping, digital twins, advanced materials, and automation, ISFT 2026 is designed to bridge cutting-edge research with real-world manufacturing applications," notes Jibak Dasgupta, Director General & CEO, IMTMA.

Agenda with Industry Relevance

ISFT 2026 will feature two keynote sessions, 12 technical presentations, and a high-level panel discussion addressing the most disruptive trends in metal forming. Topics will span:

- Next-Gen Manufacturing:** High-Performance Presses for Aerospace and Defence Industries
- Digital Transformation:** Agentic Digital Twins for Intelligent Sheet Metal Forming and Advanced Simulation Techniques
- Material Science:** High-Strength Aluminium 7000 Series Sheetmetal: Analysing the Demand, Manufacturing Constraints, and Roadmap for Indigenous Production
- Process Innovation:** Hot Stamping advances, Friction-assisted

technology, and Additive Manufacturing in the Aerospace sector

Tooling: Advancements in tool design for forming Ultra-High-Strength Steel (UHSS) parts.

Learning Beyond the Seminar

A key highlight for delegates is exclusive access to IMTEX FORMING 2026, running from January 21–25, 2026. This allows participants to witness live demonstrations of machinery and technologies discussed during the seminar, bridging the gap between theory and practice. By combining strategic insight, technical depth, and real-world exposure, ISFT 2026 reinforces IMTMA's role as a catalyst for industry growth. **SD**

TUBE AND PROFILE LASER CUTTING MACHINES

Durma India's HD-TC Compact 60250

Durma India Pvt Ltd
www.durmaindia.com
Hall & Stall: 5/B-102

The HD-TC Compact 60250 expands Durma's product range with its compact design and competitive pricing advantage. The tube and profile laser cutting machine is an ideal solution for small and medium-sized manufacturers

operating in the furniture, lighting, and construction industries. With its low operating costs, fast return on investment, and easy maintenance, it takes productivity to the next level.

Offering a maximum cutting diameter of Ø250 mm and a minimum of Ø16 mm, it enables a wide range of tube and profile applications. The semi-automatic loading system allows up to six profiles to be loaded simultaneously on the chain, while different profile types can be processed automatically in sequence according to the part program. An optional 3 m or 6 m unloading system provides automatic discharge of cut parts, ensuring smooth and continuous operation.

The independent 2+2 chuck system ensures secure gripping of various profile shapes, while the central chuck, located closest to the cutting head, delivers exceptional cutting precision. Three servo-controlled support arms automatically align profiles during loading to maximize efficiency. With over 70 years of engineering excellence, Durmazlar continues to deliver innovation, efficiency, and value to manufacturers worldwide under the DURMA brand. **SD**

PLASMA CUTTING AUTOMATION SOLUTIONS

Q-Torch Auto Change System for Efficiency and Availability

With the Q-Torch Auto Change System, Kjellberg Finsterwalde is presenting a powerful solution for automating plasma cutting. The system enables fast and precise changing of torch heads without

any operator intervention. This saves valuable machine time, reduces downtime, and significantly increases system availability. The system is based on pneumatically controlled locking. The number of docking stations is un-

limited and can be flexibly adapted to one's production processes. This can be easily retrofitted to existing Q systems. The QR code for tool identification ensures that the correct technology is always prepared for each cutting task. **SD**

LASER CUTTING MACHINES

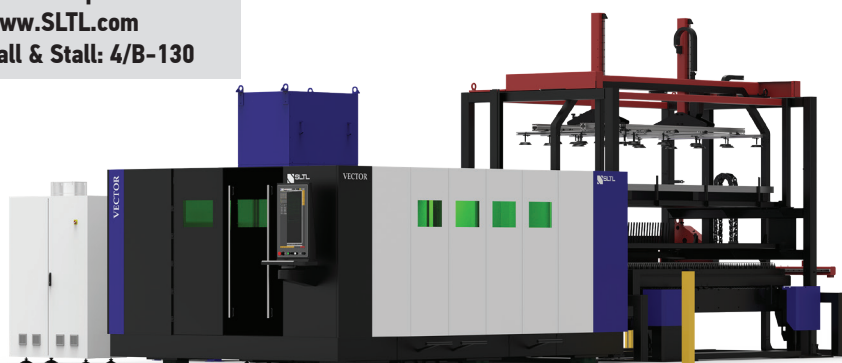

Laser Automation Made Effortless with SLTL's Vector

Imagine a manufacturing floor where machines run 24/7 with minimal supervision - where precision, speed, and intelligence come together seamlessly. The Vector by SLTL Group turns that vision into reality. A next-generation, fully automated fiber laser cutting system, Vector is built for Industry 4.0, offering up to 30 kW power, 3G acceleration, and micron-level precision for non-stop, intelligent production.

Equipped with SLTL's e-Tron technology, Vector optimizes power, gas, and motion in real time to ensure flawless cuts, even on thick or reflective materials. Smart automation features like auto-focus control, rapid gas switching, dynamic fume extraction, and adaptive nesting software boost productivity while cutting cycle times and material waste. With Zero-Setup Automation, dual-pallet exchange, and compact intelligent workflow, Vector eliminates idle time and reduces labor dependency, maximizing floor efficiency. Safety is built in, with light-curtain protection, anti-collision systems, and an intuitive HMI for effortless operation.

More than a laser cutting machine, Vector is a self-driven manufacturing system, designed to help one stop cutting metal and start cutting costs. It's where automation meets innovation, creating the future of fabrication today. **SD**

CORDLESS MARKING GUNS

Defining Precision and Portability with E-MARK EVO

In today's fast-moving manufacturing environment, marking must be accurate, reliable, and effortless—and that's where the E-MARK EVO by SIC Marking, marketed by Purshotam Company Pvt Ltd, stands out. This next-generation, fully cordless marking gun is built for professionals who demand power and portability without compromise. Compact and ergonomic, and weighing just 3.5 kg, it remains comfortable even during extended use. Despite its lightweight design, the tungsten carbide stylus delivers deep, permanent markings on metals and plastics up to 62 HRC, across flat, curved, and complex surfaces.

With its integrated screen and built-in software, creating or editing marking files is quick and intuitive—no laptop required. Smart features like barcode data import, duplicate detection, and secure operator/supervisor modes make every day marking safer and more efficient.

An integrated screen and built-in software allow users to create or edit marking files quickly, without the need for a laptop. Smart features such

as barcode data import, duplicate detection, and secure operator and supervisor modes make every day marking safer and more efficient.

Powered by a 36 V battery, the E-MARK EVO operates for up to three hours and recharges in just one hour, with dual batteries ensuring uninterrupted work. LED lighting, a robust cast-aluminium frame, and the option of Standard or Booster versions for deeper, paint-proof marking make it well suited to real-world industrial demands. **SD**

GANTRY HIGH-SPEED PRESSES

CHD Series for Delivering JIS Super-Grade Accuracy

The CHD Series Gantry Double Plungers Precision High-Speed Press, from Ming Xu (Dongguan) Precision Machinery, is engineered to meet the stringent demands of high-precision applications such as stator rotors and terminals. Designed to deliver JIS super-grade accuracy, the Series features a robust gantry-type frame optimized

via Finite Element Analysis (FEA). The high-strength cast iron structure undergoes rigorous annealing and Vibratory Stress Relief (VSR), ensuring long-term rigidity and significantly less deflection than traditional C-frame presses.

At the core of its stability is an advanced oil cooling system that regulates internal thermal balance, preventing expansion and maintaining Bottom Dead Center (BDC) consistency. Coupled with a tailored counter-dynamic balancing system, the press effectively compensates for upper die rebound, ensuring smooth operation even at high speeds.

Operational efficiency is maximized through user-centric features, including electric die height adjustment, a hydraulic slide locking device for enhanced safety, and a centralized crank lubrication system to eliminate pipe breakage risks. Controlled via an intuitive PLC interface, the CHD Series is the ultimate solution for manufacturers seeking reliability, safety, and next-generation precision. **SD**

CO₂ LASER SYSTEMS

Luxinar to Debut AOM Laser Technology

At IMTEX FORMING 2026, Luxinar is showcasing its SR 25 AOM sealed CO₂ laser source with an integrated acousto-optic modulator (AOM) developed for high-precision applications that require a significantly higher switching speed for faster scan speeds or a reduced heat-affected zone (HAZ). The SR 25 AOM is available at a wavelength of 9.3µm and with a rated power of 150W, and its integrated AOM creates 60 times faster optical rise and fall times of less than 1µs, which can minimize unnecessary heat energy from typical pulse rise/fall times of approximately 60µs.

The AOM range, which also includes the 75W-rated SR 10 AOM, provides superior pulse-to-pulse control, output power stability, and an integrated and field-replaceable RF power supply for ease of installation. **SD**

RV Forms & Gears, an ASM Technologies Group company, delivers comprehensive automation and manufacturing solutions that integrate advanced laser technologies, robotics, and intelligent process control. Its systems are engineered to enhance weld quality, reduce cycle times, and significantly improve operational safety, while ensuring precision, repeatability, and high productivity. RV Forms and Gears specialize in laser welding automation for critical industrial applications, providing clean, strong, and distortion-free welds that meet demanding quality standards. As the industry transitions toward electric mobility, the company offers complete EV manufacturing solutions under one roof, including battery cell welding

for cylindrical, prismatic, and pouch cells, laser ablation and terminal cleaning, and dissimilar material welding such as multi-material busbar assemblies. With a legacy spanning over five decades, RV Forms & Gears is one of India's oldest and most respected fixture building companies. Its state-of-the-art design and manufacturing facilities in Guindy, Chennai enable it to support customers with world-class engineering, reliable execution, and innovative automation solutions that align with the future of manufacturing. Visitors to IMTEX FORMING 2026 can explore RV Forms & Gears' comprehensive portfolio of laser welding automation and EV manufacturing solutions tailored for high-precision applications. **SD**

FIBER LASER CUTTING MACHINES

G Series from STM Laser

Source: S&T Engineers

STM Laser, the manufacturing brand of the S&T Group, embodies the group's 30 years of engineering excellence in the machine tool industry. The G Series Fiber Laser Cutting Machine reflects STM's commitment to innovation, precision, and reliability — purpose-built to meet the evolving needs of modern fabrication and sheet metal industries. Designed and manufactured in India, the G Series is a symbol of S&T's 'Make in India, Crafted with Global Precision' philosophy. With bed travel lengths ranging from 3.0 to 6.5 m, travel widths from 1.5 to 2.5 m, and laser power options from 1.5 kW to 12 kW, it delivers high-speed, burr-free cutting performance across diverse materials and thicknesses. Every STM Laser machine is backed by S&T's nationwide service network of over 18 branches, ensuring prompt installation, training, and after-sales support. From concept to cutting, STM Laser empowers Indian manufacturing with world-class laser technology engineered for productivity, consistency, and long-term reliability. **SD**

INTERNATIONAL TIES

Fueling Indo-Italian Industry Engagement

India represents one of the most promising export destinations for the Italian Machine Tool Manufacturing industry represented by UCIMU-SISTEMI PER PRODURRE, notes the association's President Riccardo Rosa.

To further strengthen this engagement, UCIMU has launched targeted initiatives aimed at supporting Italian companies and promoting their offerings in India. One such effort is the PIATTAFORMA INDIA project, envisioned as a comprehensive support hub for providing assistance and advice to Italian companies interested in operating in the area. Complementing this initiative is the ITC-Italian Technology Center in Pune that promotes the 'Made in Italy' brand and supports around 10 Italian capital goods manufacturers in making contacts

“India represents one of the most promising export destinations for the Italian Machine Tool Manufacturing industry represented by UCIMU-SISTEMI PER PRODURRE.”

RICCARDO ROSA
President
Italian Machine Tool, Robot and Automation Systems Manufacturers Association, Italy (UCIMU)

with the Indian industry, institutions, and cultural bodies.

Italian Participation at IMTEX FORMING 2026

Rosa points out that “Italy has always been highly specialized in the Sheet Metal Forming Machi-

nery sector,” adding that the country ranks second globally in production as of 2024. IMTEX FORMING 2026 has robust participation from Italian machine tool builders keen to expand their footprint in India. Around 20 Italian companies are participating in

the show, including direct exhibitors and brands represented. Some are included in Ice-Agenzia Collettiva, while some have opted for individual booths.

Future-Ready Italian Solutions

Italian forming technology is widely recognized for its design-driven engineering and adaptability. Rosa identifies the core strengths of the sector as “flexibility, very high technological standards, marked product customization, and after-sale assistance.” In recent years, these strengths have been reinforced by advanced digitalization and machine interconnectivity. This evolution has enabled higher productivity, improved efficiency, enhanced machine safety, better resource utilization in compliance with eco-sustainability, and reduced downtime. **SD**

TUBE BENDING SYSTEMS

For Advanced Tube Bending Applications

The 32CNC10X6-LR is designed for high-performance, complex tube-forming applications. Its rotating bend head allows both clockwise (CW) and counterclockwise (CCW)

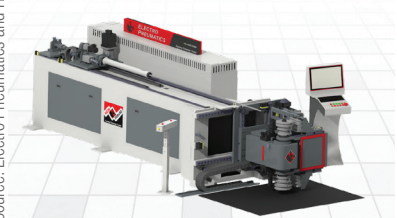

bending, enabling seamless production of intricate geometries. With up to six tooling stacks (three on each side), users can perform multiple-radius bends in a single setup—dramatically reducing changeovers and enhancing throughput. The cycle time reduction of around 30 percent makes the rotating bend head

machine highly productive. This design is most suitable for the Aerospace and Furniture industries. Powered by a 10-axis servo-controlled system, the machine delivers exceptional accuracy, repeatability and energy efficiency. Its intelligent architecture integrates advanced digital features including IoT connectivity, simulation tools, diagnostics, and energy-saving technologies, positioning it as a smart, future-ready solution for modern manufacturing environments.

Salient Features

The 32CNC10X6-LR stands out with a rotating bend head offering a $\pm 180^\circ$ range for both CW and CCW bending, supported by an all-electric system with 10 programmable servo axes for exceptional control. Its high tooling flexibility—featuring up to six stacks for multi-radius bending—enables complex forms to be produced in a single setup. With energy-efficient, hydraulic-free operation and an impressive accuracy of ± 0.05 mm/deg across all axes, the machine ensures consistent, high-precision output. **SD**

PRECISION DEBURRING SOLUTIONS

Grind Master's CF Series for Automotive Components

Grind Master Machines Pvt Ltd
www.grindmaster.co.in
Hall & Stall: 4/A-112

The CF Series from Grind Master represents the pinnacle of precision deburring technology, engineered to meet the stringent demands of the automotive industry. Designed for fine-blanked, punched, laser-cut, and sintered parts, these machines deliver consistent deburring and edge radiusing, ensuring the safety, performance, and durability of critical components.

Key Features

- **Advanced Deburring Technology:** The CF Series combines planetary brush heads with abrasive belt grinding to achieve complete burr removal and precise micro-radius generation on complex profiles.
- **Automation & Efficiency:** It features the NANOFINISH Control System, automatic tool wear compensation, and optional auto-load/unload systems that enable continuous 24/7 production.
- **Versatile Applications:** The CF Series is ideal for processing clutch and brake parts, seat belt components, compressor valve plates, and other precision automotive components.

- **Wet Deburring Capability:** Its integrated coolant filtration system ensures optimal surface finishes while extending tool life.
- **Modular Design:** The modular design allows configuration for single or double-sided operations and includes automatic component reversing with a demagnetizer at the output for seamless processing.

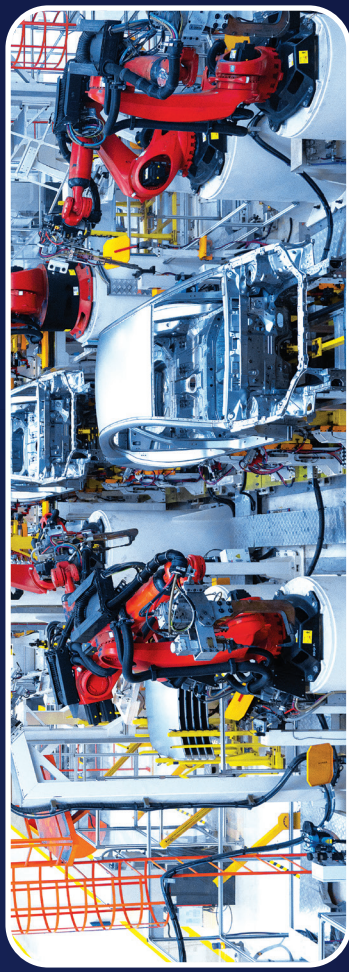

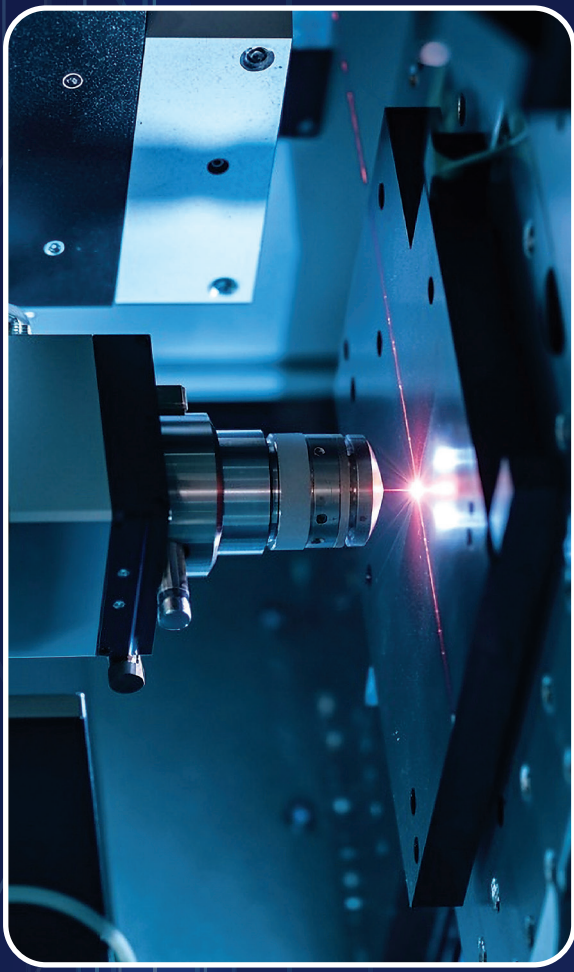

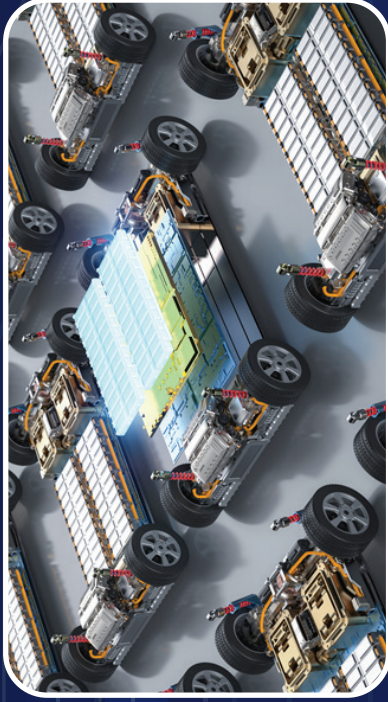

With over 40 years of expertise and a proven track record in precision finishing, Grind Master's CF Series offers a total solution—machine, process know-how, and tooling—trusted by leading global automotive manufacturers. **SD**

ASIA'S LEADING FIXTURE BUILDER

Present

LASER AUTOMATION

Trusted By The World's Best Companies
For over 53 years Forms and Gears has been designing and manufacturing fixtures for the world's leading companies, in 10 countries across the globe and has been at the forefront of introducing the latest technology like Industry 4.0, fixtures enabled with AI, Laser Automation and Laser Welding for EV Batteries.
