

Pilana Metal from Czech Republic, a known name in sawing since 1934, is a leading manufacturer of whole range of Sawing products starting from Band Saw Blades (manufacturing in M42 and M51 grades) and Hack saw Blades (All HSS hacksaw blades, Bimetal hand hack saw blades), Circular saws (HSS and TCT), Bimetal band saw for wood cutting.

Pilana Metal has developed a high performance, M42 Grindcut bandsaw blades with all grinded teeth and will be launched during up coming IMTEX 2019 exhibition. Product will be on display at the stand during IMTEX 2019.

Pilana has developed a special tooth profile (with all grinded teeth) to cut solid bars of steels or non ferrous in volume. Its very positive teeth (15 degree), cuts through the material and having lasting performance.

Grindcut is recommended for better productivity on solid bars of alloy steels, stainless steels or non-ferrous metals, seamless thickwalled tubes. It has performance at an affordable cost.

Pilana Grindcut blade has a new tooth design, based on new tech machines, capable of high speed and feeds, keeping in mind productivity as well as economics of cutting too. The teeth have positive form that penetrates seamlessly and with less noise. Tooth tip processing contributes to longer blade life and increased cutting accuracy.

This is a different high-speed edge from Pilana Metal. Due to its profile and edge content, along with precision-grind teeth, its results are excellent, as for as productivity and quality of cut are concerned, and life expectancy is higher.

M42-Grindcut applications.
